## What RxPortal can do for You...

A New Web Site to Help You Manage Your Prescriptions

SXC recently won the 2007 Pharmacy Benefit Management Institute's (PBMI) Rx Benefit Award for the "What's My Co-Pay" money-saving feature.

When you go to the RxPortal Web site, you'll find some very helpful tools:

**An Easy but Secure Web site** - RxPortal is easy to use and you will have your own password for it. That way your medical information stays secure.

**Prescription History** - You'll be able to view the prescriptions you've taken in the past. You'll also be able to print a copy for your records or your doctor, or use it to track your costs over time.

**Information About Your Medication** - If your doctor prescribes a new medication or you want some information on one you take now, you'll be able to find information on the RxPortal. You can learn what to do about a missed dose. You'll find both the brand name and its generic, drug interactions and how best to store your prescriptions.

**"My Meds"** - You'll be able to set up a "My Meds" list which tells you all about your prescription, lets you add new information as you find it and can be combined with your prescription history.

**Location of Drug Stores** - RxPortal finds local pharmacies for you, even ones open 24 hours that accept your health plan's insurance. You can search by address or zip code for drug stores within 25 miles of your home. RxPortal even gives you a map.

**"What's My Co-Pay?"** - The award-winning "What's My Co-Pay Tool" helps you see what your co-pay may be at the drug store.

## What RxPortal can do for You...

### Security:

**Application Level** - Users must be authenticated to gain access to the Portal. This can be accomplished by providing sufficient demographic information to identify the member.

Passwords are encrypted in the database using one way encryption which scrambles the password before storing.

To ensure strong security, usernames and passwords must be at least 4 - 10 characters in length and cannot be the same. The user must change their password every 3 months.

**Network Level** - There are three elements to Network Level security.

- **Firewalls** - Use of security a scheme that prevent unauthorized users from gaining access to the network and monitors the transfer of information to and from the network.

- **Intrusion Detection** - Firewalls act as a hard stop for obvious holes in a network. Intrusion Detection compensates for those policies that are permissive, but also have the potential to act as an avenue for undesirable activities.
- **Secure Sockets Layer** - The membership is required to be directly or indirectly authenticated by supplying sensitive/extensive demographic information

### Registration:

All users who access RxPortal are required to complete the registration page. Access RxPortal at <https://ga.stateportal.sxc.com> and click on the **Member Login** link.
